

Data Management Services that Deliver Clean Data, Earlier

koneksa

Protecting data integrity from first-patient-in through database lock across traditional, digital, and complex data sources.

Koneksa builds and manages EDC environments designed to deliver high-quality, traceable, inspection-ready data from the start.

Cleaning, query management, and reconciliation run continuously through execution, not as a scramble before lock. Our roots in digital measurement give us a rare fluency in sensor, eCOA, and complex data streams; an edge we bring to data management whether or not a Koneksa measurement strategy is part of your study.

What We Deliver

Faster build + EDC configuration

Protocol-to-database translation, reusable validated standards, and CRF and edit-check development that cut startup friction across digital and traditional measures.

Cleaner data, earlier

Real-time review, proactive query management, and risk-based cleaning surface issues while there is still time to fix them, not at lock.

Complex + digital data integration

eCOA/ePRO, labs, wearables and sensors, imaging, biomarkers, IRT/RTSM, and external-vendor data reconciled into one controlled, usable flow.

Standards + submission readiness

CDISC-aligned structures, SDTM handoff readiness, and raw-to-submission traceability built for FDA, EMA, and global inspection.

Platform configuration + admin

User provisioning, versioning, and ongoing support for leading EDC platforms, including official Medidata configuration and reseller services.

Predictable database lock

Lock-readiness planning, query-aging management, and clean, analysis-ready handoffs mean fewer late-cycle surprises.

*Use us where
you need us*

Full-service data management, embedded support, study rescue and remediation, or standalone database build. Or license Lodestar™ to your own team.

The Lodestar™ Advantage

LODESTAR

Because our data management runs on Lodestar™, EDC ingest flows straight into mapping and programming with nothing lost between hand-offs. Errors are caught at the source before they compound across the submission cycle, and every data decision stays traceable from raw record to submission output. Available as a service from our team or licensed to yours.

Get inspection-ready clinical data from day one, delivered by our team, or powered in yours through Lodestar™.
